PATENTS

- 2002 **Femoral heads**
Femoral endoprostheses for replacing only the epiphyseal or metaphyseal parts of the femur, e.g. endoprosthetic femoral heads or necks directly fixed to the natural femur by internal fixation devices implanted without ablation of the whole natural femoral head.
Inventor Lorenzo Spotorno, Roland Willi, Guido Grappiolo
Zimmer GmbH- EP1709944A3- EUROPE
- 2003 **A support apparatus**
Rests specially adapted therefor; Arrangements of patient-supporting surfaces. The invention relates to a support apparatus for the support of a patient lying in the lateral position at the pelvis having a plurality of support rods, in particular precisely three support rods, which each have a known pre-determined length and which are attached adjustably relative to one another to a common support frame such that different spatial configurations of the probe ends of the support rods facing the patient can be set in use in order to make the spatial position of the support points at which the support rods are supported when used on the patient detectable via the free ends of the support rods opposite to the probe ends and serving as detection ends.
Inventor Simon-Paul Dominati, Guido Grappiolo
Zimmer GmbH-CA2482360C-CANADA
- 2005 **Femoral neck prosthesis**
The invention relates to a shaft for a femoral neck prosthesis, which comprises an anchoring area which is arranged inside the femur in order to anchor the prosthesis into bone, a head area which is axially adjacent to the anchoring area on the proximal side, said head area comprising a device which is connected to the prosthesis head, in addition to a distal end which is arranged opposite the head area in the axial direction of the anchoring area. The invention is characterised in that the maximum cross-sectional dimension of the head area is at the most equal and, in particular, smaller than the maximum diameter of the anchoring area, in such a manner that the maximum cross-sectional dimension of the shaft is in the anchoring area.

Inventor Guido Grappiolo, Roland Willi

Zimmer GmbH-US9763790B2-UNITED STATES

2009

Global Tissue-Sparing (GTS) femoral short stem.

The invention relates to a shaft for a short stem for THA.

Inventor Guido Grappiolo

ITRM20100186A1- ITALY

2019

Kit of orthopedic surgical devices for the provision of a cemented femoral prosthesis implant;

Special tools or methods for implanting or extracting artificial joints, accessories, bone grafts or substitutes, or particular adaptations therefor for insertion or extraction of endoprosthetic joints or of accessories thereof of hip femoral endoprotheses

RESEARCH AREAS OF INTEREST

Since 1991, I began research activity directed mainly to hip prosthetic surgery, with international collaborations with renowned authors such as: Prof. T. Gruen, Prof. D. Blaha (U.S.A.), Prof. H. Wagner (Germany), Prof. E. Morscher (Switzerland).

To promote research in hip surgery, I founded with my collaborators the "Livio Sciutto Foundation - ONLUS," whose scientific direction I assumed until 2018, creating and maintaining contacts with other national and international research institutions.

My research activity has led me to contact the major international schools with which I collaborate to research new and improved strategies in the field of minimally invasive prosthetics, computer-assisted surgery and conservative surgery, through the development of new prosthetic models and the exploration of new materials.

SCIENTIFIC PRODUCTION

Author and co-author of 61 publications in international journals (Pubmed) and 66 other publications and book chapters.
